

If you are getting unwanted messages on your PC pay attention to this:

“Oh, no! Not another virus. That is the third one this week! Does this sound like you? Are you constantly being bombarded with viruses or unwanted ads on your desktop? If your answer is yes, we have the way for you to get rid of all that bothers your PC once and for all.”

Why should you have to deal with the problem of having to get rid of viruses, ads, or anything that

can damage your PC, when you shouldn't even get them in the first place! Our how-to guide will show you how to get rid of all those pesky problems without all the hassles.

"Thank you for your great tips. After reading and applying what you said in your guide, I noticed no more ads appearing on my PC, and when I get viruses, I know how to get rid of them quickly. Thanks again guys."

Jennifer Holts, CEO

Working World

Did you know that millions of PCs are infected with some kind of virus on a daily basis?

In some cases, the virus attacks the computer and wipes out the hard drive. The user then has to spend a lot of time and

maybe money to restore his/her PC. Computer users everywhere face daily struggles with using their computers. Some people get so frustrated that they hate to even turn it on. This can be a very painful experience if you allow it to be.

Do you go through this yourself? If you do, how do you handle the virus? Do you have an antivirus program installed to check the virus, or are you left helpless by a dirty program that just filtered into your PC? Or do you try to handle the problem yourself?

What about unwanted ads or being directed to sites you don't want or didn't expect? How you do react to it?

You probably just deal with the problem the best you can right? Is that the way you want to handle your PC on a regular basis?

What if you knew that you could eliminate those viruses before they damaged your computer with just a few simple steps? Would that interest you any?

Of course you would! Who wants to have viruses on their system!

Wouldn't it be nice to work on your PC without seeing any ads show up you didn't want to see?

But that is exactly what you would see on your PC if you do not get our how-to guide. Let me explain why!

The PC is set up to run programs and has the ability to communicate with other computers by way of the Internet. This way we can be productive while using it. The computer allows us to do things we may not be able to do ourselves, at least not as fast. But what if something

happened that caused the computer to malfunction. We would be sitting ducks if we relied on it for our livelihood.

The computer is very important to our daily existence as we depend on it for everything, right? Because of our dependence on that metal box, we must make sure that nothing happens to it.

So what can you do to make sure you protect your PC from harm? The answer is simple. In order to stop keep viruses from attacking and destroying your computer; in order to keep ads from popping up on your desktop or from showing up in your most used programs; or to stop your PC from running slower than it normally does because of some spyware crap that got downloaded and installed on your PC when you didn't know it, you need one thing:

A well protected PC

How do you do that? How can you protect your PC from all the bad elements that can infiltrate your PC on a daily basis, without spending even one dime of your money?

The first thing you do is to find out what problem your PC is facing. What is it that's happening to your PC? You may be working on your PC one minute and see a virus warning appear on your screen the next. Or, you may receive an intruder alert (if you have Internet security software installed). Or you may be surfing the "Net" and be taken to a website where you did not request. All these situations are caused by the unwelcome influence of spyware, viruses, and adware.

You could try to remove those pesky critters by buying automatic removal tools. These tools are useful for removing the programs, but the problem with many of these removal programs is that not all spyware or adware files are detectable. So when the program executes, the programs

the removal software recognizes is removed, but not all are. Some are left behind. Therefore, a method to remove these demon-possessed, PC trouble makers has to exist. And once such method is to do it manually. The only problem with this method is that no one really knows how to deal with or knows how to remove these files without doing harm to their system.

Why should you suffer the anguish of having to deal with a PC that doesn't work right because some jerk decides to do some dirty work and your PC becomes the victim? If you allow this to happen you are only

cheating yourself out of having a fully working PC

which is not good for you. How can you work around this you may ask? The secret may surprise you.

Think about this – you wake up one day, turn your PC, do your work as you usually do, then your virus scanner starts working. You minimize it and continue your work. Finally it

finishes and you see viruses found. The problem is the virus scanner does not remove the virus. You panic and wonder what to do.

So you click on update to see if the virus scanning program can update the virus definitions so it can destroy the virus.

But what if you attempt this and the computer fails to bring up Internet Explorer. Your PC is now corrupted. You take evasive action by turning the PC off. But when you restart it, the PC won't boot up. Your system just crashed because a virus altered the boot sector of your hard drive. Now what?

You call a computer technician who comes over later and restores your PC. He then smacks you with a hefty bill. Your PC is now working correctly but you have a bill to pay now.

Does this series of events sound familiar to you?

If it does maybe you need to take steps to avoid this from happening in the first place.

I know how you feel because I use to be in your shoes. I had to deal with viruses and unwanted ads on my system constantly. I lost my computer once and had to re-install my operating system because of it. I kept pulling teeth to fix my computer until I learned the secret.

After applying the secret I no longer have to deal with viruses, unwanted ads, or anything else that may interfere in the process of my being able to work error free.

If this can happen to me it sure can happen to you. How can you get the protection your PC deserves like I got for mine?

The secret is contained in my ebook:

*How to Get Rid of Spyware, Viruses, and
Adware Manually*

In this book you get all the little secrets, all the lowdown on what you have to do in order to clear your PC of unwanted

viruses, ads, or anything else that could damage your system, and take the necessary steps to keep them from coming back.

You get all the secrets on what steps you need to take to avoid adware and spyware that can threaten to slow your computer down to a crawl.

You learn all the little secrets it takes to keep your PC safe and well protected without spending one dime!

How would you like the ability to turn your PC on each day, knowing that you won't get bombarded with a virus or anything else that will mess up your day or corrupt your system! Not possible you may think. Think again! It is possible and it can happen to you right now.

You can get rid of anything that can cause damage to your PC and interfere in your life easily and quickly. All it takes is one step from you!

Remember, the power is in you to change the way your PC will work. You can either have a PC that breaks down all the time, or have one that functions normally so you can do your work without disruption.

The choice is yours. Why be tortured constantly with a PC that you know you need to use for your business, or for your children's education. **You owe it to yourself to take action.**

You're in luck because just now I created this powerful, explosive book on how to deal with and rid yourself of viruses, unwanted ads, and other pesky programs that want to take over your computer and slow it down.

The book is a step-by-step guide that teaches you about viruses, spyware, and adware, what it is, why it happens, what you can do to prevent it, and what steps you need to

take to remove any that get on your PC, and how to do it **manually.**

Why manually? Many antivirus, adware, and spyware programs are written in such a way that when they get installed in your computer, bits and pieces of code is scattered through your computer. And there is no uninstall function. Once it gets on the PC's hard drive, you won't be able to remove it completely by using automatic detection software.

What a hard way to deal with such crap, right?

Even after your detector removes the offending programs, you will continue your work and suddenly get an error message. Or you may load a program and start seeing ads show again. Or you may go on the Internet and find you are being sent to a web page you didn't expect to go to. What an aggravating experience. This is why in many cases, these

programs must be removed manually. If this is the case how can I remove them manually?

Don't worry about that. *How to Get Rid of Spyware, Viruses, and Adware Manually* shows you how to do it step-by-step.

Every subject, test, and procedure in this book has been tested and proven reliable and works, guaranteed. I know they worked for me.

But don't take my word for it. Read what others had to say who used the techniques and tricks found in the book.

"I bought the ebook and used it on my own PC and let me tell you something. I was amazed by the simplicity of your explanations and your instructions were clear and concise. I tried every single tip and technique you mentioned in your book, and for the first time in months, I don't see stupid ads showing up in my programs like they did before. It is so nice

to work with a PC that doesn't screw up on me or drags along. Thanks guys for a great product."

David W. Holden

Wheels of Freestyle, Inc.

"I bough the book and applied what I learned to my own PC. What a change. After I got rid of the adware and spyware on my computer, I saw a noticeable increase in speed. You guys really know what you are doing. Thank you for such a dynamite product. It is worth its weight in gold."

So what are you waiting for? Stop wasting precious time having to live with and struggle with viruses. Why should you

allow your computer to get contaminated with outside crap that only serves to harm you and not help you!

If you want to stop fighting with constant bombardment of viruses, adware, or spyware, you need to act now so you won't have to live another day with a slow or crashing computer.

To do this, you need to get your copy of ***How to Get Rid of Spyware, Viruses, and Adware Manually.***

I guarantee these techniques will have a powerful and immediate impact on your PC, and even yourself.

Here's a quick look at just some of the powerful information you will read in my unique, comprehensive, step-by-step guide:

- * What is spyware? In order to fight spyware you have to know what it is. How can you fight something you don't even know? This is why it is imperative you know about spyware so you can deal with it.

* Why spyware isn't blocked. You may have software that helps to block viruses on your PC, but why doesn't spyware get blocked? The answers may surprise you. Read the book and you'll see exactly how you get spyware and what it can do to your system.

* Eliminate spyware from your computer permanently. This seems farfetched right? Well believe it or not, you can get rid of spyware completely and on a permanent basis. But you need to know how. You can't depend entirely on spyware removal software. You need assistance. The book shows you how to do it in plain English so you can following along with no problems.

* What are viruses? In order for you to get rid of them you have to know what they are and learn how to recognize them. This chapter will focus on viruses, as well as the common ones you will find. You will learn

what a virus can do to your PC, so at least you will be able to recognize the symptoms of one.

* How to remove a virus manually. In this chapter, you will learn the steps required to find the virus and remove it from your system. You will be shown step-by-step what you need to do to accomplish this task. You'll be shown how to make changes in your Registry so you won't face error messages or virus attacks again.

* Protecting Your PC. This chapter explains what steps you will need to take to make sure you secure your PC from future attacks. Once you perform the procedures required, you will be in great shape to prevent future onslaughts.

* What is adware? Before you can get rid of adware, you must know what it is. This is the only way you will be able to recognize it. Think about this. How can you get rid of something if you can't recognize what it is? So

knowing this first will help you in your quest to rid your computer of such bad programs.

* Blocking adware. Knowing about adware will help you to recognize it. Now you have to know the procedures to block it. You have to block it before you remove it.

This is because if you remove it first, some remnants may still be around and try to replicate the installation process. By blocking access first, you prevent this as you remove all traces of the program.

* Removing adware. Once you have blocked access to adware sites, you will now focus on removing all traces of adware from your PC. This chapter explains in detail what you need to know to do this task with the minimum of effort or inconvenience.

Hey, do yourself a favor and stop worrying about viruses, adware, or spyware. Once you complete

reading our ebook, you won't have them any longer.

Guaranteed!

I promise that after you read our ebook, and apply the principles therein, you will no longer have to deal with viruses, spyware, or adware again. You will have a dependable PC that will provide you with good service for months and years to come. That is until your hard crashes with age.

And that my friend is a guarantee!

Okay, you've convinced me. How do I get your ebook so I can live without viruses, spyware, or adware and have a fast computer that will work reliably for me now and into the future?

That's easy. The price of the ebook is _____.

Just click here to order your copy of ***How to Get Rid of Spyware, Viruses, and Adware Manually*** now before they are all gone.

And if you order right now, we will throw in this ebooks completely free:

*** How to Surf the Web Anonymously to Avoid Hackers**

Also, we will include as bonuses the two free reports:

- **Registry Repair Software -- ErrorDoctor 2007**
- **Spyware Remover – SpyRemover.com**

If for any reason you decide to ask for a complete refund, you can keep the book and reports as our way of saying thank you for doing business with us.

By the way, these bonuses are yours to keep even in the unlikely event you decide to take advantage of our ironclad money-back guarantee:

Your satisfaction is guaranteed with our 100%, no-questions-asked, iron-clad money-back guarantee. If you aren't absolutely thrilled with our product, just contact us, so we'll know you are returning it within one year of purchase and we'll refund 100% of your purchase price. No questions asked.

But wait! If you're not sure about making that step to purchase it, I'll do you one favor. All I ask is that you just get it and try it out. If it doesn't do everything I say and more, if you don't see your computer function better quickly, or if you find you can't get rid of the spyware or adware in your computer, just let me know and I'll give you every cent of your money back! So you have nothing to lose and everything to gain.
